

## REGULATORY MODE QUESTIONNAIRE (KRUGLANSKI ET AL., 2000)

### **RMQ Scoring Key:**

The RMQ yields independent scores for Assessment and Locomotion (as well as a Lie subscale), both ranging from 1-6. There are 3 reverse-scored questions for the assessment subscale and 2 reverse-scored questions for the locomotion subscale.

Twelve questions quantify Assessment and twelve questions quantify Locomotion. Therefore, both the assessment and locomotion sums should be divided by 12:

$$\textit{Assessment} = [ (7-Q2) + Q6 + Q7 + Q9 + (7-Q10) + Q11 + Q15 + Q19 + Q20 + Q22 + (7-Q27) + Q30 ] / 12$$

$$\textit{Locomotion} = [ Q1 + Q3 + Q4 + Q5 + Q8 + (7-Q13) + Q16 + Q21 + (7-Q24) + Q25 + Q28 + Q29 ] / 12$$
